

EDGAR XBRL Taxonomy Reference

Comprehensive mapping of US-GAAP XBRL tags to financial statement line items. Built from SEC EDGAR documentation, FASB taxonomy specs, XBRL US Data Quality Committee rules, Calcbench element definitions, EdgarTools/Intrinio/sec-api standardization mappings, and direct EDGAR API research.

Key: Tags are listed in priority order (most common first). The `extractAnnualFact` function in `edgar.js` tries tags in order and merges results -- first tag wins per year, later tags fill gaps. This handles tag transitions (e.g., ASC 606 revenue change in 2018).

Period types:

- `duration` = income statement / cash flow (covers a period, e.g., fiscal year)
- `instant` = balance sheet (point in time, e.g., end of fiscal year)

Unit types: `USD` , `USD/shares` , `shares`

1. Income Statement (duration)

Revenue

Line Item	XBRL Tag	Notes
Revenue (ASC 606)	<code>RevenueFromContractWithCustomerExcludingAssessedTax</code>	Post-2018 standard, excludes sales tax. Most companies since ASC 606 adoption.
Revenue (general)	<code>Revenues</code>	Broad catch-all. Many companies use this.
Revenue (legacy net)	<code>SalesRevenueNet</code>	Pre-ASC 606 tag, deprecated ~2018. Still in older filings.
Revenue (goods, legacy)	<code>SalesRevenueGoodsNet</code>	Pre-ASC 606. Product companies.
Revenue (including tax)	<code>RevenueFromContractWithCustomerIncludingAssessedTax</code>	Rare -- includes assessed tax.
Revenue (services, legacy)	<code>SalesRevenueServicesNet</code>	Pre-ASC 606. Service companies.
Revenue (alternative)	<code>RevenueNotFromContractWithCustomer</code>	Non-ASC 606 revenue (e.g., leasing income). Supplemental only.

Tag transition: `SalesRevenueNet` / `SalesRevenueGoodsNet` (pre-2018) -->

`RevenueFromContractWithCustomerExcludingAssessedTax` (post-2018). Must merge across both for full history.

5. Major Tag Transitions & Gotchas

Revenue (ASC 606 transition, ~2018)

- Pre-2018: SalesRevenueNet , SalesRevenueGoodsNet , SalesRevenueServicesNet
- Post-2018: RevenueFromContractWithCustomerExcludingAssessedTax
- Must merge across both tag sets for 10+ year history

Leases (ASC 842 transition, ~2019)

- Pre-2019: CapitalLeaseObligationsCurrent , CapitalLeaseObligationsNoncurrent
- Post-2019: OperatingLeaseRightOfUseAsset , OperatingLeaseLiabilityCurrent , OperatingLeaseLiabilityNoncurrent , FinanceLeaseRightOfUseAsset , FinanceLeaseLiabilityCurrent , FinanceLeaseLiabilityNoncurrent
- Operating leases moved onto balance sheet. Total reported debt jumped for asset-heavy companies.

Long-term Debt tag variation

Companies use different tags for the same concept:

- LongTermDebtNoncurrent -- most specific, excludes current maturities
- LongTermDebt -- total LT debt, may include current maturities
- LongTermDebtAndCapitalLeaseObligations -- pre-ASC 842, includes capital leases
- Some companies only report DebtCurrent + LongTermDebtNoncurrent (must sum for total)
- Others report LongTermDebt which already includes current portion

Available-for-Sale Securities (ASU 2016-01 transition, ~2018)

- Pre-2018: AvailableForSaleSecuritiesCurrent , AvailableForSaleSecuritiesNoncurrent
- Post-2018: DebtSecuritiesAvailableForSaleCurrent , DebtSecuritiesAvailableForSaleNoncurrent

Interest Expense (2024 taxonomy change)

- Pre-2024: InterestExpense meant total interest (operating + non-operating)
- Post-2024: InterestExpense definition broadened, new InterestExpenseOperating and InterestExpenseNonoperating elements added
- InterestIncomeExpenseNet should only include operating interest

Cash balance tag evolution

- Old: CashAndCashEquivalentsPeriodIncreaseDecrease
- New: CashCashEquivalentsRestrictedCashAndRestrictedCashEquivalentsPeriodIncreaseDecreaseIncludingExchangeRateEffect
- Reflects inclusion of restricted cash per ASU 2016-18

Fiscal Year Mapping

- Use XBRL fy field, NOT getFullYear() on end date
- Companies with non-calendar fiscal years (e.g., SFM ends early January, AAPL ends late September) would map to wrong year using date parsing
- Deduplicate by fiscal year, keeping latest period end date (not latest filed date)

Sign Conventions

- Revenue, Assets, Income = positive
 - Expenses, Liabilities = positive (reported as positive amounts)
 - Cash flow: CapEx reported as positive (cash outflow); must subtract from Operating CF for FCF
 - TreasuryStockValue = positive (contra-equity, but stored as positive amount)
 - IncreaseDecreaseIn* working capital changes: Follow T-account convention (asset increase = negative cash impact)
-

6. How Data Providers Normalize Tags

The Core Problem

The US-GAAP XBRL taxonomy has ~17,000+ tags. Companies can also create custom extension tags. None of the ~8,000 US public companies file their statements in exactly the same way.

EdgarTools Approach

Maps ~2,000 different XBRL tags to 95 standardized concepts (e.g., "Revenue", "CommonEquity"). Uses a standardization directory with concept mapping files. When multiple filings map different tags to the same standard concept, rows are merged rather than duplicated.

Intrinio Approach

Proprietary ML + combinatorial analysis. Maps each company's XBRL tags to standardized fields. Handles cases where "Total Revenue" aggregates "Product Revenue" + "Service Revenue" without double-counting.

Our Approach (edgarFinancials.js)

For each line item, define an ordered list of fallback tags. Try each tag via `extractAnnualFact`, merge results across all tags (first tag wins per year, later tags fill gaps for older years). This correctly handles:

- ASC 606 revenue transition
 - Different debt tag preferences
 - Company-specific tag choices
 - Tag deprecation over time
